

NASDive Diver Communication System

Stay in touch with a fully digital diver communications system

Based on a 20-year track record, Imenco Nautronix is a global leader in diver communication systems and offers NASDive. The system can be tailored for a wide range of standard and bespoke commercial and military diving requirements, to suit both air and mixed gas diving.

- NASDive is the only fully digital diver communications system available
- The system has digital hardware, unlike other systems on the market, NASDive uniquely offers digitisation of speech subsea
- Unique in supporting digital signalling over both copper and fibre umbilicals and is therefore resilient against the effects of attenuation and noise pickup affecting other systems

Special Features:

- High clarity speech communications
- Clear helium speech unscrambling for all locations simultaneously
- Substantially reduced cabling requirements for vessel and bell
- Remote fault finding capability
- System is easily expandable and re-configurable by user
- Advanced noise filtering techniques integrated into Through Water Communications
- The digital format also allows easy integration of wireless headsets for all supervisors, and ship to shore telephone communications for all divers regardless of locations
- In the event that bell communication is lost with dive control, the system automatically transfers control to the bellman ensuring unscrambled communications with the excursion divers is maintained, a unique safety benefit
